COMPANY PROFILE · HOTELS, RESORTS, INNS & CONDOTELS

A guest judges one hotel.
One company should answer for it.

AlliedTech Solutions supplies the front desk, the locks, the network, the TVs, the cameras, the cooling and the power — designed, installed, commissioned and supported in-house. This profile lists every system we can put inside a property.

25+	100+	50+	24/7

WHO WE ARE

A technology company that also holds the ladder.

AlliedTech Solutions is a Philippines-based technology company. For 25+ years we have combined deep engineering discipline with business strategy — delivering AI, automation, custom software and industrial solutions. We are a multi-discipline company: we build the systems modern businesses run on, and we back our software with real-world engineering across HVAC, industrial and solar. Our engineering team is based in Metro Manila.

That combination is why hospitality suits us. A property does not need a software vendor and five contractors — it needs the reservations chart, the locks on the doors, the WiFi in the far wing, the cameras, the chillers and the standby power to work together, and it needs one number to call when they do not. On the mechanical side we are a **PCAB-licensed mechanical contractor with 200+ HVAC and refrigeration projects**.

How to read this profile. The systems on the following pages are grouped the way a hotelier already thinks about a property — front of house, back of house, and the building itself. Take the row you need now and the rest when it is due. Nothing here is sold as a bundle you must take whole.

CAPABILITY RACK

Everything we can put inside a property.

Each line is a system we design, install, commission and support ourselves.

Front of house

What the guest meets

Hotel Management System	Reservations and a live room chart, check-in and check-out in seconds, guest profiles and group bookings, guest folios, rates, seasons and packages.
Smart Door Access — AlliedAccess	A complete smart door access platform for hotels, serviced residences and co-living spaces. Keycard, PIN and phone access; guest access that expires itself at checkout; staff, floor and lift control.
In-Room IPTV & Entertainment	17,000+ live channels, your own movie and video library, and in-house property channels on the screens you already own — with per-room access that expires at checkout.
Restaurant & Bar POS	Terminal hardware, receipt printers, barcode scanners and cash drawers wired to cloud software — so the outlet tab posts to the guest folio instead of a scratch pad.
Guest WiFi	Structured cabling, enterprise access points, switching and controllers — coverage that holds in the lift lobby and the far wing.
Paid WiFi & Vouchers	For resorts and apartelles that sell connectivity: plans, prepaid vouchers, automated billing and a branded customer portal.
AI Front-Desk Assistant	Chatbots and AI call handling for booking enquiries outside office hours, so a question at 1 AM does not wait for morning.
Online Booking Payments	Card and e-wallet collection for deposits and reservations through our own payments hub.
In-Room Ordering	Room service, F&B and housekeeping requests ordered from the in-room television or the guest WiFi captive portal, landing at the right outlet with the room number attached and posting to the guest folio.

Back of house

What your staff runs

Housekeeping Board	Vacant, occupied, cleaning, inspected — updated from the floor and visible at the desk, so a room is sellable the moment it is ready.
Occupancy & Revenue Reporting	Occupancy, average room rate and revenue by day, room type and channel — for a single property or across a group.
Business Automation & CRM	Workflow automation and one CRM for corporate accounts, group bookings and event enquiries.
Property Marketing	Facebook, Instagram, Google, TikTok and YouTube advertising with AI-assisted creative and reporting tied to real results — aimed at direct bookings.
Custom Software	The module your property runs that nobody sells off the shelf — specified, built and supported by our own engineers.
Capex Financing	Structuring and strategy for refurbishment or equipment funding with partner banks and financing companies. AlliedTech is a facilitator, not a lender.
Property & Business Cover	Property, business and group insurance matched through our insurance partners, with an advisor to follow up. No obligation.

Condotel Unit Ledger	For condotel and serviced-residence operators: owner dues and collections, unit statements, maintenance and BIR-ready books.

The building Plant, power and structure

Cooling & HVAC — ClimateWorks	Full-cycle HVAC and refrigeration: inverter split, cassette, ducted, VRF, chillers and air handling — design, equipment supply, ducting, testing, commissioning and after-sales maintenance.
Aircon Cleaning & Care	Scheduled deep-cleaning and preventive maintenance, booked without upfront payment — so guest rooms stay cold and the electricity bill stops climbing quietly.
CCTV & Surveillance	IP camera systems with NVR recording, AI motion alerts and remote viewing — lobby, corridors, back-of-house and perimeter.
Network & IT Backbone	Structured cabling, enterprise WiFi, switches and firewalls, server rooms and clean UPS power — installed and documented.
Solar Power	Commercial solar design, supply and installation sized to your actual load, for the second-biggest line on a hotel P&L.
Industrial Engineering — IndustrialWorks	Cooling towers, ventilation, evaporative cooling, filtration and cleanrooms, compressed air, generators, UPS and warehouse equipment.
Security Assist	Five layers, taken together or one at a time: on-premise AI monitoring on your own servers for back-of-house, perimeter and restricted areas (consent-based enrolment, Data Privacy pack); 24/7 remote watch by our team with escalation to your duty manager; panic, duress and one-tap lockdown for night staff and lone workers; licensed manned guards coordinated through our partner agency; and cybersecurity, backups and Data Privacy documentation for guest data.

ON THE FLOOR

What actually changes.

The key expires when the guest leaves. Access is issued for a stay and ends with it — no rekeying a floor because one card went home in a pocket, and a record of every door, every time.

Cold rooms, and a bill that stops climbing. Deep-cleaning goes on a schedule instead of on a complaint, so coils never quietly cost you a star — or a month of unexplained electricity.

HOW WE ENGAGE

Four steps, in this order.

STEP 01

Walkthrough

Forty-five minutes on site or on a call. Bring last month’s complaint log and a busy weekend’s bookings. We identify which row of the rack is costing you most right now.

STEP 02

Survey & scope

Our engineers survey the property: coverage, cabling routes, door schedule, plant condition and what integrates with the equipment you are keeping. Nothing is quoted before this.

STEP 03

Phased proposal

A written plan with sequence, hardware, integration points, commissioning and staff training — then the quotation. Priced per property, because no two properties cost the same.

STEP 04

Install, commission, support

Our own engineers install and commission on site and train your staff on the live system. Support continues afterwards — we remain the number you call.

SUPPORT

24/7 · support@alliedtech.solutions

AlliedTech Solutions Corp. is a technology and engineering provider. Every system in this profile is scoped, specified and quoted per property after a site survey — coverage, hardware, integration with equipment you keep, and timeline are confirmed during scoping. No pricing is published in this document because no two properties cost the same. Face and recognition features are deployed on consent-based enrolment with a Data Privacy pack, and the recognition servers stay on your premises. Manned guarding is coordinated through a licensed partner agency. For financing, AlliedTech acts as a facilitator with partner banks and financing companies, not as a lender. Issued November 2026.
