COMPANY PROFILE · SCHOOLS, COLLEGES & CAMPUSES

A parent judges your school twice.
One company can answer for both mornings.

AlliedTech Solutions supplies the enrolment and grading system, the gate that recognises every learner, the campus network and cameras, the canteen counter, the classroom cooling and the standby power. This profile lists every system we can put on a campus.

25+	100+	50+	24/7
YEARS EXPERIENCE	PROJECTS DELIVERED	CLIENTS SERVED	SUPPORT

WHO WE ARE

A technology company that also holds the ladder.

AlliedTech Solutions is a Philippines-based technology company. For 25+ years we have combined deep engineering discipline with business strategy — delivering AI, automation, custom software and industrial solutions. We build the systems modern organisations run on, and we back our software with real-world engineering across HVAC, industrial and solar. Our engineering team is based in Metro Manila.

A campus needs all of it at once — the registrar's screen, the gate, the canteen counter, the classroom aircon and the roof — and would rather call one number than chase five contractors. On the mechanical side we are a **PCAB-licensed mechanical contractor with 200+ HVAC and refrigeration projects**, including the VRF system at the MAPUA Gymnasium in Intramuros.

How to read this profile. The systems are grouped the way a principal already divides a campus — the gate, the classroom, and the campus itself. Take the row that hurts this school year and the rest when the budget allows; nothing here is sold as a bundle you must take whole.

CAPABILITY BOARD

Everything we can put on a campus.

Each line is a system we design, install, commission and support ourselves.

The gate

Arrival, safety and who is inside

Face Check-in at the Gate	Every learner photo-logged on arrival, so the attendance log is created at the gate instead of written up afterwards.
Parent Safety Alerts	Parents know their child arrived — instantly — instead of guessing until dismissal.
Smart Classroom Doors	Classroom and office doors that open only for the right people, by face or by a tap of the school ID.
Tap-Card Learner IDs	Encoded photo IDs and readers as the everyday backup to face entry, issued and re-issued by your own registrar.
Visitor Management	Every guest logged in and out at the gate, with a record you can actually produce afterwards.
Security Assist	Five layers, taken together or one at a time: on-premise AI monitoring on your own servers, kept inside the campus (consent-based enrolment with English and Filipino forms, plus a Data Privacy pack); 24/7 remote watch by our team; panic, duress and one-tap lockdown; licensed manned guards through our partner agency; and cybersecurity, backups and Data Privacy documentation.
CCTV & Surveillance	HD camera coverage across corridors, grounds, gates and perimeter, with motion alerts and remote viewing.

The classroom

Enrolment, grading and learning

Online Enrolment	Parents enrol and re-enrol from a phone, requirements uploaded once, and your registrar approves instead of re-typing.
DepEd-Aligned Grading	Grading rules follow DO 8 s.2015 and MATATAG by configuration — every teacher computes the same way, every time.
LIS-Format Export	Learner records exported in LIS format, so submission is a download instead of a week of manual encoding.
ESC / Voucher Billing	ESC and voucher learners billed and tracked properly, with balances that reconcile against what actually gets remitted.
BIR-Aware Cashiering	Tuition, miscellaneous and other fees collected with receipts and reports your accountant and the BIR will accept.
Online Exams & LMS	Lessons and timed exams that grade themselves, with scheduling, calendar and campus operations alongside.
Offline Encoding	Encoding continues when the internet drops, then syncs cleanly the moment it comes back.
Custom Software	The thing your campus does that nobody sells off the shelf — specified, built and supported by our own engineers.

The campus

Buildings, network, power and the canteen

Campus WiFi & Cabling	Site-surveyed access-point placement and structured cabling, for coverage in every classroom rather than only near the office.
Canteen Ordering	Pre-ordering and cashless paying from the campus WiFi portal or a campus screen, so the counter prepares against a list instead of a crowd. Parents can load a balance and set what it may be spent on.
Canteen & Bookstore POS	Counter terminals, receipt printers and barcode scanning for the canteen, bookstore and uniform shop.
Classroom Cooling	Classroom, gym and auditorium cooling designed, installed and maintained by our mechanical team.
Standby Power & UPS	Generators and uninterruptible power, so enrolment day, the exam period and the gate do not stop with the grid.
Solar Power	Commercial solar design, supply and installation sized to your actual load — a campus roof is usually the cheapest one you own.
Dormitory Screens	In-room screens for dormitories and boarding houses, with your own campus channel in the loop.
Admissions AI Assistant	Enquiry and admissions chat that answers at 9 PM, when parents actually get around to asking.
Capex Financing	Structuring and strategy for a building, a bus or an equipment package with partner banks and financing companies. AlliedTech is a facilitator, not a lender.
Property & Group Cover	Property, business and group insurance matched through our insurance partners, with an advisor to follow up.

ON THE GROUND

What actually changes.

The gate writes the log, not the guard. Every learner is recognised on arrival, the parent gets the message before homeroom, and the recognition servers stay on your premises rather than in the cloud.

The canteen queue moves off the queue. Learners and staff pre-order and pay from the campus WiFi portal, so break time is a collection rather than a crush at the window.

HOW WE ENGAGE

Four steps, in this order.

STEP 01

Walkthrough

Forty-five minutes on site or on a call. Bring last enrolment season's bottleneck and your gate's current arrangement; we identify which row is costing your staff most.

STEP 02

Survey & scope

Our engineers survey the campus: lane layout at the gates, door schedule, cabling routes, access-point placement, plant condition, and what integrates with what you keep.

STEP 03

Staged proposal

A written plan sequenced around your school calendar, with hardware, integration points, commissioning, consent forms and staff training — then the quotation, priced per campus.

STEP 04

Install, commission, support

Our own engineers install and commission on site, finishing gate and cabling work before learners arrive, and train your staff on the live system. Support continues afterwards.

THIS PROFILE ONLINE

https://alliedtech.solutions/school

AlliedTech Solutions Corp. is a technology and engineering provider. Every system in this profile is scoped, specified and quoted per campus after a site survey — coverage, hardware, integration with equipment you keep, and timeline are confirmed during scoping. No pricing is published in this document because no two campuses cost the same. Face recognition is deployed on consent-based enrolment, with English and Filipino consent forms and a Data Privacy pack; the recognition servers stay on your premises. Manned guarding is coordinated through a licensed partner agency. For financing, AlliedTech acts as a facilitator with partner banks and financing companies, not as a lender. Issued November 2026.
